

Safeguard your remote workforce with fast and secure endpoint protection

Metallic™ Endpoint Backup delivers proven, award-winning data protection for your remote workforce – all with the simplicity of SaaS. Built on industry-leading Commvault technology and powered by Microsoft Azure, Metallic ensures employee laptop and desktop data is protected, compliant, and recoverable from today's threats.

Protect laptop and desktop data

- Centrally deploy, manage, and protect endpoint data
- Rapidly recover from deletion or malicious attack
- Reduce your IT burden with user self-service restore options

Reduced risk

A system's only as strong as its most vulnerable laptop or desktop. Metallic secures valuable endpoint backup, so your data stays secure, stays compliant, and stays rapidly recoverable from user deletion, corruption, or ransomware attack.

- Automated, silent backups without impacting user productivity
- Secure erase, geo-location, and remote wipe functions
- Granular search, point-in-time, and cross-OS restore options
- eDiscovery capabilities like compliance search & export
- Self-service user search and recovery capabilities

Enterprise-grade security

Secure your workforce, wherever it may be. With stringent security standards, privacy protocols, and zero-trust access controls built-in, Metallic provides enterprise-grade security for businesses of all sizes to help combat today's data loss threats.

- Anomaly detection to identify ransomware and abnormal file access patterns
- Air-gapped and immutable data backup copies
- At-rest and in-flight data encryption
- Role-based, SSO, SAML authentication controls
- SOC2, ISO 27001, and GDPR compliant

No compromise SaaS

With Metallic™ Endpoint Backup, you get cost-effective data protection without the complexity. Metallic means frictionless deployments, remote management, and hassle-free maintenance. SaaS that's industry-proven to reduce costs and eliminate headaches – without compromise.

- Unlimited cloud storage and one year of retention included
- No hardware, installation, or large upfront capital investments
- Zero egress fees or hidden storage charges
- Automatic updates and maintenance built-in

**Extended data retention also available*
