Metallic® Salesforce Backup

Industry-proven data protection for production and sandbox environments

Metallic® SaaS Backup, from Commvault, delivers powerful, enterprise-grade data backup and recovery. With broad-ranging coverage across the Salesforce Cloud, Metallic safeguards valuable data from deletion, corruption, and ransomware attack. Whether granularly restoring records, seeding and populating sandbox environments, or protecting multiple production orgs, Metallic is industry-proven to keep your Cloud data secure and recoverable - without the complexity.

Protect your Salesforce investment - without the headache

✓ Reduce downtime, prevent data loss, and rapidly recover from attack

✓ Seed, retain, and replace sandbox environments with ease

✓ Leverage advanced, hardened, and enterprise-grade security controls

Hassle-free Protection

Robust protection for valuable Salesforce data, including content, files, custom objects, profiles, metadata, hierarchal relationships, seed data, and more. Effortlessly backup and restore data at scale, without cumbersome exports or lengthy refresh windows.

- Preserve orgs, users, configurations, and settings
- Automate daily backups
- Leverage granular search, version-level, and in-place data recovery controls
- Quickly restore data with full-fidelity
- Maintain production and sandbox environments from a single interface

Award-winning SaaS

With Metallic® Salesforce Backup, you get proven data protection, without the hassle. Metallic means simple deployments, built-in maintenance, and automatic updates. SaaS that's proven to reduce costs and eliminate headaches - without sacrificing security or performance.

- Unlimited cloud storage with unlimited retention built-in
- Bring your own AWS storage options
- No hardware, installation, or large upfront capital investments
- Zero egress fees or hidden storage charges
- Streamlined management with ultimate user scalability

Multi-layered Security

Enterprise-grade protection to safeguard your Salesforce Cloud data from ransomware attack. With stringent security standards, privacy protocols, and zero-trust access controls built-in, Metallic provides advanced controls that combat today's data loss threats.

- Isolated, air-gapped backups from source data
- Layered security plus GDPR compliance
- At-rest and in-flight data encryption
- Role-based, SSO, SAML authentication controls
- SOC2 and ISO 27001 certified

Supported Salesforce Applications

Cloud

· Sales Cloud
· Service Cloud
· Financial Cloud
· Health Cloud

Supported Salesforce Editions

· Lightning Developer
· Lightning Enterprise
· Lightning Performance
· Lightning Unlimited

Storage

· Unlimited Azure storage included with unlimited retention
· Bring your own AWS storage options also available
