Compliance as a Service

Keeping you compliant, secure
and in control.

Data protection is becoming more complex, with regulatory and compliance pressure increasing. Businesses need to protect and effectively control and manage data to proactively respond to data governance and regulatory compliance requirements.

The legislative requirement to protect personal client information highlights the risks associated with data handling such as data breaches, data loss and compliance failures. PoPIA requires that appropriate and reasonable security measures be put in place to effectively protect all personal information.

With stringent data protection and privacy regulations now being enforced, you need to identify and locate unprotected data, sensitive data, and duplicate copies that should not be stored at all. It is essential to understand why your business has the data, how sensitive it is and who is accessing, using, or sharing it. Locating and identifying data across your data landscape can be a time-consuming challenge.

What you don't know about your data can harm your business in a big way!

- What type of data do you have?
- Where is it stored? Should it be there?
- Who owns it?
- Who has access to the data?
- Is it redundant?
- Is it protected?
- Do you need it?
- Can you reduce infrastructure costs?
- Are you compliant with the Protection of Personal Information Act (POPIA)?

DMP SA can help you find and secure sensitive data and reduce risk with convenient, flexible OPEX based Compliance as a Service.

Define, find, and
manage your critical
and sensitive data with
Compliance as a Service

COMPLIANCE
AS A SERVICE
KEY
BENEFITS

- | | |
|--|--|
| <p>✓ Leading enterprise technology combined with data management expertise as a fully operational monthly expense.</p> | <p>✓ Rapidly respond to eDiscovery or compliance requests, place data under legal hold or mark it for further review.</p> |
| <p>✓ Identify what sensitive and critical data resides where, who owns it, and is it secured and protected.</p> | <p>✓ Find and assign ownership to misplaced data and eliminate redundant copies.</p> |
| <p>✓ Uncover data privacy risks within your data environment and quarantine or delete sensitive data.</p> | <p>✓ Reduce data breaches by finding unprotected sensitive data and secure your sensitive data wherever it lives.</p> |
| <p>✓ Gain insight into what PII (Personally Identifiable Information) you have in production, backup systems, on-premises and across clouds.</p> | <p>✓ Manage access permissions and controls with role-based security and access control with data encryption on backup data and data in transit to protect against unauthorised access.</p> |
| <p>✓ Reporting included with workflows to review, audit & report on compliance initiatives.</p> | <p>✓ The option to retain an immutable copy of your data, despite disaster or cyberattack with a secure copy in the DMP Cloud, based in South Africa for long-term data retention.</p> |
