

Eaton 9PX G2 UPS systems

Eaton's 9PX G2 UPS systems provide high power density, enhanced battery management, best-in-class efficiency, maximum power reliability, simplified fleet management and certified cybersecurity.

Powering Business Worldwide

Eaton 9PX G2 UPS systems

Featuring advanced technology upgrades and customer-centric feature enhancements, Eaton's 9PX G2 online double-conversion UPS systems build on the highly successful 9PX platform to create a best-in-class power management solution. Industry-leading hardware technology and Brightlayer software allow end users and service providers to deploy distributed edge applications with confidence, simplify fleet management and proactively monitor all critical equipment.

Ideal applications include:

- Edge networks
- Distributed IT
- Mission-critical environments
- Data centers
- Server rooms
- Network closets
- AI at the edge

More power in less space

Using wide-bandgap (WBG) technology, 9PX G2 UPS systems maximize usable output power per UPS and allow you to support more devices. Rack size is also reduced for several models, saving valuable space for revenue-generating equipment. **8-11 kVA models shrink from 6U to 4U while providing four L6-30R outlets!**

* Version with MBP includes (3) L6-30R outlets on MBP.

Enhanced battery management

Eaton's new ABM+ technology improves predictive battery replacement analytics to better pinpoint when you should replace UPS batteries. This predictive algorithm allows the UPS to proactively alert the user of battery health and remaining service life based on actual usage and conditions. ABM+ prevents unexpected downtime caused by waiting too long and unnecessary expense caused by replacing too soon. It also optimizes charging to increase battery lifespan up to 50%. If batteries require replacement, they are hot-swappable and accessible from the front of the rack enclosure.

Versatile configurations

9PX G2 UPS systems have the versatility to meet the demands of a wide array of IT applications. 208V and 120V output options are available with or without maintenance bypass, and each UPS includes a 4-post rackmount rail kit and tower stands. An optional mounting kit also supports 2-post rack installation. The LCD and badge rotate to match the UPS cabinet's orientation.

Maximum power reliability

With true online double conversion, hot-swappable batteries, internal bypass and optional 0U maintenance bypass, the 9PX G2 is perfect for preventing costly downtime of critical equipment in distributed edge deployments. Out of the box, each UPS supports up to 12 optional extended battery modules (EBMs), and adaptive charging allows faster recharge times. UPS systems can be configured to provide hours of battery backup runtime to support sites without generator backup.

A 9PX G2 UPS and 12 EBMs are shown mounted in an Eaton heavy-duty rack enclosure with 5,000 lb. weight capacity. This configuration can support 3 kW for over 6 hours. (See page 12 for complete battery backup runtime charts.)

The maintenance bypass module prevents service-related downtime and does not require additional rack space. It can be mounted behind the UPS, on the side or top of a rack, on a wall or in a tower orientation using the included hardware.

Best-in-class efficiency

Up to
97%
efficiency

With up to 97% efficiency in online mode, the 9PX G2 is the most efficient UPS system in its class, reducing energy costs and TCO. All models are certified to comply

with the latest ENERGY STAR standards to reduce greenhouse gas emissions. Load segments with energy metering help IT managers optimize energy use. Sustainable product packaging also helps reduce environmental impact.

High-visibility control panel

With a high-contrast LCD that tilts up to 45 degrees for optimal viewing, 9PX G2 UPS systems make local management easy. The LCD displays key data like load, efficiency, runtime remaining and alarms. A large color LED light bar below the LCD helps you diagnose UPS status from a distance and quickly locate units that require attention, even in a crowded data center.

The LED light bar glows blue during normal operation and changes color to indicate automatic bypass, faults and other conditions.

Simplified fleet management

Every 9PX G2 3–11 kVA UPS comes with a cybersecure Gigabit Network Card, allowing you to monitor and manage your UPS fleet remotely for greater convenience and peace of mind.

For smaller environments, you can connect to UPS systems using a web browser and receive email alerts. For larger deployments spanning multiple locations, 9PX G2 UPS systems integrate smoothly via SNMP with digital solutions from our **Brightlayer Data Centers suite**.

Distributed IT Performance Management (DITPM) software helps you remotely monitor and control up to thousands of UPS systems and PDUs at remote sites.

- Know what's happening with real-time reports, trend charts, dashboards and alerts prioritized by severity.
- Troubleshoot and resolve issues more quickly.
- Remotely control load segments regardless of vendor.
- Update firmware remotely to improve cybersecurity.
- Leverage integrations with virtualization platform leaders.
- Gracefully shut down IT equipment in your required order.

Remote power management dashboard from DITPM software.

Data Center Performance Management (DCPM) software helps you manage power, space, connectivity and cooling to maximize uptime while minimizing capital and operating costs.

- Gain efficiencies and reduce costs with real-time data and automated alerts.
- View 2D and 3D visualizations and automated reports.
- Gain near-real-time visibility into key performance indicators.

Our **Remote Monitoring Service**, also known as PredictPulse, provides 24/7 remote monitoring and predictive analytics to forecast failures before issues arise and dispatches field service technicians when needed.

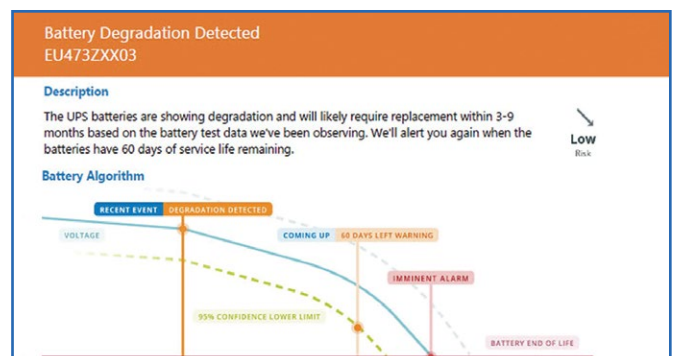

- Know about future component failures before they happen.
- Gain fast response and repairs from Eaton technicians.
- Access real-time health trends, alarms and outages prevented.

Our **Automated Replacement Service (ARS)** continuously monitors single-phase UPS systems across multiple sites to detect failures and send a replacement UPS as fast as the next day.

- Maintain edge sites with minimal IT resources.
- Increase uptime and protect your investment.
- Replace and recycle failed units with no fuss.

Certified cybersecurity

9PX G2 UPS systems include Eaton's cybersecure network management card (NETWORK-M3), which complies with UL and IEC cybersecurity standards and provides industry-leading security and automation features.

Zero-trust architecture

- Minimizes cybersecurity vulnerabilities through hardware root of trust, enabling secure boot and complete chain of trust with private hardware key encryption.

Zero-touch provisioning

- Automatically configures equipment to save time and reduce errors in large-scale deployments.

User-configurable firewall

- Reduces your organization's attackable surface area.
- Helps meet network/security compliance requirements.
- Supports IP white list.

RESTful API

- Allows you to easily integrate networked UPS systems with native systems and automate M2M interactions.

Secure access via web browser or SNMP

- Access UPS systems using the secure web browser interface or integrate with a network management system via SNMP.

You can upgrade 9PX G2 UPS firmware remotely through the included network card to keep UPS systems at all your remote sites updated with the latest features and security.

Firmware updates are free of charge and do not require a service contract.

Ready for virtualization, HCI and AI

Brightlayer software enables seamless integration and intelligent coordination with virtualized, hyperconverged and generative AI infrastructures. Support for complex orchestrations during blackouts and other power events allows you to extend runtime, preserve data and gracefully shut down or migrate servers per your preferences.

Eaton is the leader in power management for virtualization platforms and has more than 500 hours invested in testing with alliance partners like Cisco, Dell, HPE, NetApp, Nutanix, Scale Computing and VMware.

Extended battery modules (EBMs) and accessories

Catalog number	Description
9PXEbm180RTG2	9PX G2 3U rack/tower EBM, 180V VRLA. Compatible with 3-6 kVA 9PX G2 VRLA UPS. Connect up to 12 EBMs per UPS. Includes 1 ft. EBM cable. 5.1 x 17.3 x 25 in., 144.8 lb.
9PXEbm240RTG2	9PX G2 3U rack/tower EBM, 240V VRLA. Compatible with 8-11 kVA 9PX G2 VRLA UPS. Connect up to 12 EBMs per UPS. Includes 1.3 ft. EBM cable. 5.1 x 17.3 x 26.4 in., 136.7 lb.
EBMcb180RT	6 ft. EBM cable extension (180V).
EBMcb240RT	6 ft. EBM cable extension (240V).
CBLADAPT180RT	Adapter cable to connect 9PX G1 EBM to 9PX G2 UPS (180V).
CBLADAPT240RT	Adapter cable to connect 9PX G1 EBM to 9PX G2 UPS (240V).

Network management accessories

Catalog number	Description
NETWORK-M3	Network management card with Web/SNMP and UL/IEC certified cybersecurity. (Bundled with all 9PX G2 UPS models listed in this brochure.)
EMPD11H1C2	Environmental monitoring probe with temperature, humidity and dry contact monitoring. (Connects to NETWORK-M3.)
INDGW-M2	Industrial gateway card with Web/SNMP, industrial protocol support and UL/IEC certified cybersecurity.
RELAY-MS	Relay/serial interface card.

Other hardware accessories

Catalog number	Description
RK2PC	2-post rack mounting rail kit for 9PX G2 UPS systems and EBMs. (One kit required per cabinet.)
BINTSYS	Battery integration system. Vertical mounting platform with caster wheel kit.

Rackmount power distribution units (PDUs) (For additional PDU options, visit Eaton.com/PDU. For hardwired connections, contact Eaton.)

Catalog number	Description
EMAT09-10	1.92 kW managed rack PDU, 1U, L5-20P / 5-20P input, (8) 5-20R outlets. Compatible with 9PX3K3UNTF5G2, 9PX5KP1G2, 9PX5KTF5G2, 9PX6KP1G2, 9PX6KTF5G2, 9PX11KTF11G2, 9PX11KTF11MG2, 9PX11KTF5G2.
