

INTELLIGENT PLATFORM FOR ACCELERATED INTEGRATED INSPECTION SERVICES

Establish secure entry points where traffic flows freely and information across the field is accessible in a real-time view.

S2 Global's integration platform, CertScan® delivers unprecedented security and revenue focused inspection capabilities including 100% screening with faster throughput and dramatically better detection.

Command & Control

Trade & Transport Inspection

People & Packages Inspection

Deployed by commercial and government customers at over 60 large-scale sites worldwide, CertScan® has improved inspection—facilitating faster and more secure entry for trade, transport and events.

Regardless of the environment—an airport a land border, a sea port or a stadium—the push is on to reduce the friction in moving people, bags, cargo and vehicles quickly through security screening while finding ways to increase revenue and comply with security standards. Yet the volume of people and things on the move keeps going up. The result from these potentially competing pressures can be trying to do

too much, taking too long, and failing to deploy the right resources effectively.

The key is to bring the big picture into sharper focus. That means pulling together the relevant and valuable data from multiple sources to drive targeted security assessments and decision-making.

With CertScan® integration of data generated by checkpoint technology and information sources provides the solution to meet this challenge, ensuring true command and control. The result is enhanced security, operational efficiencies, increased revenue collection, higher levels of compliance, more effective resource deployment, and a better user experience.

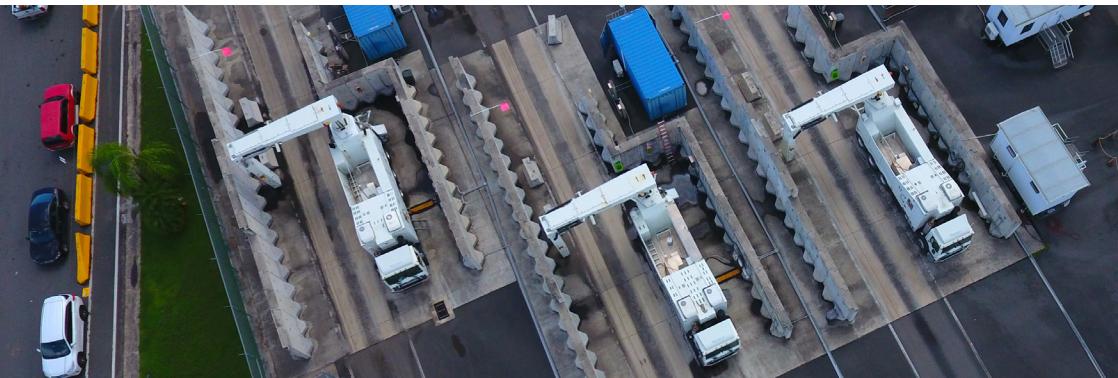

CERTSCAN®

The benefits of the CertScan® approach include:

- 1** Faster processing of people and goods – synthesis of data generated by multiple sources and application-specific business rules which provides an opportunity to automate manual processes and control specific flows.
- 2** Agile decision-making to target resources – the availability of more granular information facilitates making crucial decisions, such as the most effective deployment of personnel, shifting as needed, combined with the appropriate use of automation to streamline processing of people and goods.
- 3** Enhanced collaboration – data generated internally and from outside services creates an intelligence loop to share across networks, building more productive relationships with relevant stakeholders.

The result is a more efficient and successful screening process, shaped by decisions informed by integrated, rich data.

About S2 Global

S2 Global's integration platform, CertScan®, enables organizations to attain unprecedented security and revenue outcomes: achieving up to 100% screening improves deterrence and safety by substantially increasing seizures of threats that otherwise go undetected; increasing agent performance relieves staffing pressures and boosts effectiveness; and trade revenue is increased by double digits.

S2 Global's experience operating 60 major border crossings worldwide using CertScan® makes it the most widely adopted platform for Customs screening today. Through CertScan® organizations are ready to evolve screening operations to effectively manage growing traffic while creating revenue opportunities at trade, transport and events.

Increase Inspection Capabilities

- Integrate various Non-Intrusive Inspection (NII) and peripheral systems with informational data to process from a single common operating picture

Maximize Security System Investment

- Inter-operable and standardized systems and data increases the longevity of equipment investment

Deploy Resources Effectively

- Facilitate a well-defined and automation capable process flow to streamline operations
- Continuous system and staff improvement

Create Revenue Opportunities

- Complete data capture and aggregation across all points-of-entry and beyond; for analysis and predictive actions
