DORNIER MEDILAS H UROPULSE™ CONVENIENT STONE MANAGEMENT

☎ (55) 6719 3014 ✉ info@levbethmedical.com

EFFECTIVE | ERGONOMIC | CONVENIENT  **Dornier MedTech**

DORNIER MEDILAS H UROPULSE™

EFFECTIVE

- Ensure the quick and precise breakdown of any stone with the wide range of energy and frequency settings.
- From coarse fragmentation to complete pulverization, treatment settings can be adjusted to fit your clinical needs.
- Reach the highest level of patient care and optimal laser performance with Dornier's FlexFiber Collection – fibers made for precision.

ERGONOMIC

- Stop worrying about cord damage and cables becoming a trip hazard with the unique wireless foot switch.
- Built-in DVI Connection with picture in picture functionality allows you to always have the treatment parameters in direct view for convenient user ergonomics.
- Virtually eliminate errors with the clearly defined menus provided on the color touch screen.

CONVENIENT

- Set treatment parameters with one touch of a button using programmable settings and quickly choose the parameter set best suited for the clinical situation.
- One of the smallest systems in its product class, the compact design seamlessly integrates into your OR to optimize space.
- Leverage existing OR furniture by incorporating the laser into existing endoscopy towers, device trolleys or ceiling pendants.
- Requiring no warm up time, set-up is quick and efficient.

Among the smallest and lightest in its class, the Dornier Medilas H UroPulse™ is a compact holmium laser that is readily integrated into trolleys, racks, or ceiling pendants. This 20 W system is optimally designed for effective stone management and soft tissue applications. The user-friendly interface allows the physician to promptly modify the wide range of energy and frequency settings to ensure a quick and precise set-up throughout a variety of surgical settings.

“Dornier’s holmium lasers fit perfectly into the urological operating room and their operation is very ergonomic. As the laser display can be viewed on the endoscopy monitor and a wireless foot switch is available, the device itself does not need to be within the view and working area of the surgeon.”

– Ass. Prof. Dr. H.-M. Fritsche, University of Regensburg, Germany
